Ardor's Facts & Figures

Name	Ardor
Trades under Symbol ⓘ	ARDR
Circulating supply	998,999,495
Maximum supply	998,999,495
First USD price per coin	\$0.04
Coins Distributed in ICO	N/A
Emission rate ⓘ	No new tokens created
Blockchain	Blockchain
Consensus method ⓘ	Proof of stake
Algorithm	N/A
Time for block processing ⓘ	1
Transactions per second	100
Is coin Movable?	No
Type	Token

Ardor's Algo score

The CoinCheckup Algo score is a score based on extensive research we do on every crypto coin or token.

We apply a [fully transparent formula](#) on every coin/token in order to stay unbiased and look at the facts.

Not all coins/tokens are the same, so the formula is different for a centralized, semi-decentralized, or decentralized coin. That being said, the formula is always the same for each type of coin and our ratings are always transparent.

Ardor's Performance Statistics

⌕ How long has Ardor been trading?

Ardor has been trading for 26 months (2 years) now. According to our records, it started trading on Saturday, July 23rd 2016, for a first price of \$0.0367.

⌕ How volatile has Ardor been over the last 30 days?

Ardor's 30 day volatility has been 31.75%.

ⓘ The higher the volatility, the higher the risk and/or potential gains can be for a certain coin, since the movement is stronger for the time period in question.

⌕ How volatile has Ardor been over the past week?

Ardor's 7 day volatility has been 15.34%.

Ardor's Predictions

M0 money in the crypto market

M0: The total of all physical currency, plus accounts at the central bank which can be exchanged for physical currency

M1 money in the crypto market

M1: Measure M0 plus the amount in demand accounts, including "checking" or "current" accounts

Ardor explained In-depth!

What Is Ardor?

Positioning itself as a scalable blockchain-as-a service (BaaS) platform for entities and individual users makes Ardor a viable resource. There is a lot of interest in blockchain technology in the world, from individuals and corporations alike. However, most of this enthusiasm is killed by the inability to develop custom solutions that meet unique user needs and demands.

What Is the Problem That Ardor Solves?

Ardor is built on the NXT platform. NXT was introduced a second generation cryptocurrency, in an attempt to expand the use of blockchain technology into value transfer.

In the course of the development of NXT, three main challenges were imminent, which Ardor was designed to solve:

- Single token use
- Cloning concerns
- Blockchain bloat

Continue reading this chapter on <https://coincheckup.com/coins/Ardor/purpose>

How Does Ardor Solve the Problem?

In a structural capacity, the Ardor parent chain only maintains transactions that affect the former balances. Therefore, all the other transactions by the child chains are pruned.

This leaves a cryptographic proof that the transactions were carried out. When using an Ardor child chain, users will only work with the child chain token both for paying the transaction fee, and value transfer.

What Makes Ardor Better Than Its Competitors?

One of the biggest advantages that Ardor has over the competition is that it borrows a lot from the tried and tested Nxt blockchain, taking advantage of the benefits, and improving on the flaws.

The following are some of the reasons why Ardor stands a cut above the rest:

Java

Ardor is written in Java. Java is one of the most commonly used multiplatform programming languages in the world. Using Java means that Ardor already has a rich development environment that makes it easy for users to verify the code.

How Can Ardor Be Categorized?

Ardor can be categorized as a BaaS (Blockchain as a service) platform. This platform was born from the Nxt blockchain, that has been around for years, and features improvements and innovative concepts therefrom. Ardor features a unique architecture with one security chain and several transactional chains. This structure allows Ardor address three of the fundamental flaws that were evident in Nxt, and is present in a lot of the blockchain platforms currently running online; reducing bloat on the blockchain, hosting interconnected blockchains that are ready to use, and allowing multiple transaction tokens.

What Is Ardor's Vision for Security?

Ardor's vision into the future of BaaS and blockchain technology, in general, is about simplicity. Ardor does all the hard work and allows the users to create their own products and services on the platform while Ardor takes charge of most of the difficult stuff, like security.

Examples of Ardor use cases/applications

There are several areas where Ardor comes in handy. In terms of monetization, users can make use of the paid premium services on the platform. These include charging to promote child chain services within the respective wallets or using the in-wallet ads. By integrating Ardor into payment providers and exchanges, this allows easy conversion of child chain coins into other cryptocurrencies, which can be based on the fiat currency.
